Retrieval with citations ·
Agent-assisted delivery

Languages and frameworks

Go · Python · TypeScript · SQL ·
FastAPI · Next.js · React Native

Data

PostgreSQL · Supabase

Observability and platform

OpenTelemetry · Grafana · SLOs ·
Synthetic monitoring · Prometheus

LANGUAGES

Polish — native
English — professional
working proficiency

SUMMARY

Software engineer with 14+ years of experience building product and platform systems, most recently as a Senior Software Engineer on B2B contracts. I own features end to end: how the workflow should run, system and component boundaries, and architecture, infrastructure, reliability and scaling decisions. At Sored SA I built an LLM agent prototype that drafts a manufacturing cost estimate from a scanned drawing in minutes, grounded in the client's quoting history, with a senior estimator in control. I use AI agents as an implementation multiplier while staying responsible for technical decisions and the quality of the result. Previously, nearly five years at Form3 in Go: continuous delivery, Kubernetes across three clouds and observability.

EXPERIENCE

- **Sored SA** · precision components manufacturer May 2026 – Present
B2B contract · AI cost estimation from drawings · sored-sa.com
 - **Senior Software Engineer**
 - Designed and built an LLM agent prototype that drafts the manufacturing routing, cost and lead time from a scanned drawing in about two minutes, aiming to cut a senior estimator's hours of work to minutes.
 - Grounded it in the client's ERP quoting history behind read-only tools: every proposed step cites its source quotation or statistic, and deterministic code does all the arithmetic, never the model.
 - Left the final call with the senior estimator, who can change any step or rate and see the cost update instantly.
- **AIONA** · consumer health and longevity app Aug 2025 – May 2026
B2B contract · mobile product with an AI service · aiona.life
 - **Senior Software Engineer**
 - As the only engineer, owned the technical path from ambiguous product requirements through architecture, specifications and decomposition, delegating implementation to AI agents and reviewing their work.
 - Designed a contract-first system connecting a React Native client, Go services/workers and a separate Python AI service through Protobuf/Buf and Connect-RPC; asynchronous meal analysis used typed CloudEvents commands over Postgres-backed queues.
 - Designed service boundaries around AI workloads and structured application state so authentication, persistence, orchestration and model work remained separate.
 - Specified and reviewed production observability across the system using OpenTelemetry, resilient collector pipelines, feature-first SLOs and synthetic checks.
 - Established a reviewable agent-assisted delivery workflow using architecture context, written specifications, ADRs and versioned internal agent skills.
 - The app is live but didn't gain traction, and development was shelved.

EDUCATION

**Białystok University
of Technology**
Politechnika Białostocka
Computer Science studies ·
2006 – 2011

- **Form3** · cloud-native payments platform Jun 2020 – Mar 2025
B2B contract · London (remote) · form3.tech
 - **Senior Software Engineer, SRE Observability** Jul 2024 – Mar 2025
Observability for a cloud-native payments platform: metrics, traces and logs across a multi-cloud Kubernetes estate, covering instrumentation, dashboards and the ownership and cost of telemetry.
 - **Lead Software Engineer** Jun 2022 – Jul 2024
Technical lead for continuous delivery, releasing and internal developer tooling on Kubernetes across three clouds, used by dozens of teams shipping hundreds of deployments a day; hands-on Go throughout.
 - **Senior Engineer** Jun 2020 – Jun 2022
Go services and internal tooling for a payments platform: CI/CD, release engineering and developer experience.
- **Property Finder** · property marketplace Jun 2016 – Apr 2020
Dubai, then Warsaw · propertyfinder.ae
 - **Engineering Lead** Apr 2019 – Apr 2020
Built the company’s Warsaw engineering team from scratch and led it as tech lead: office setup, hiring four senior engineers, and close integration with the Dubai teams on the service-oriented architecture.
 - **Senior Software Developer** Jun 2016 – Jun 2019
Member of the core engineering team, designing, implementing, monitoring and maintaining product systems across the Property Finder stack.
- **XSolve** · software agency Apr 2013 – May 2016
Gliwice, Poland
Software development for external client engagements across development and senior engineering roles.
 - **Senior Software Developer** Mar 2015 – May 2016
 - **Software Developer** Apr 2013 – Mar 2015
- **Autentika** · software agency Mar 2012 – Apr 2013
 - **Software Developer**
